

**FORTY YEARS AGO, HE DISCOVERED
A NEW DIMENSION IN ECONOMICS.
NOW, THE NOBEL PRIZE HAS DISCOVERED HIM.**

Congratulations to University of Minnesota Regents Professor Emeritus Leonid Hurwicz for winning the Nobel Prize. Starting in the 1960s, he, along with fellow economists Eric Maskin and Roger Myerson, laid the foundations of mechanism design theory. Their theory became a fundamental economics tool for generations and is still applied in auctions, elections, and markets around the globe. Thank you for a discovery that has shaped our world, and congratulations on this magnificent achievement.
